

PhD studentship (Full-time)

Institution	Xi'an Jiaotong-Liverpool University, China
School	School of Intelligent Manufacturing Ecosystem
Supervisors	Principal supervisor: Dr Long Huang (XJTLU) Co-supervisor: Dr Yi Chen (XJTLU) Co-supervisor: Dr Guangliang Cheng (UoL)
Application Deadline	Open until the position is filled
Funding Availability	Funded PhD project (world-wide students)
Project Title	Multi-Physics Optimization of Control Valve Structure – An Integrated approach with Approximation Assisted Models
Contact	Please email long.huang@xjtlu.edu.cn (XJTLU principal supervisor's email address) with a subject line of the PhD project title. The principal supervisor's profile is linked here: https://www.xjtlu.edu.cn/en/departments/academic-departments/entrepreneur-college-taicang/staff/long-huang

Requirements:

The candidate should have a first class or upper second class honours degree, or a master's degree (or equivalent qualification), in Mechanical Engineering, Energy and Power Engineering, Applied Mathematics, Computer Science and other relevant fields. Evidence of good spoken and written English is essential. The candidate should have an IELTS score of **6.5 or above**, if the first language is not English. This position is open to all qualified candidates irrespective of nationality.

Degree:

The student will be awarded a PhD degree from the University of Liverpool (UK) upon successful completion of the program.

Funding:

The PhD studentship is available for three years subject to satisfactory progress by the student. The award covers tuition fees for three years (currently equivalent to RMB 99,000 per annum). It also provides up to RMB 16,500 to allow participation at international conferences during the period of the award. The scholarship holder is expected to carry out the major part of his or her research at XJTLU in Suzhou, China. However, he or she is

eligible for a research study visit to the University of Liverpool up to six months, if this is required by the project.

Project Description:

This research proposed a control valve optimization approach based on multi-physics fluid dynamics modeling. This allows for the rapid completion of key component structural design to achieve the control valve's performance requirements. This considers complex flow characteristics and structural features as multiple optimization objectives to improve the performance of control valves under actual working conditions. Finally, this project aims to construct an approximation assisted modeling framework for structural optimization design, improving the design efficiency of control valves.

How to Apply:

Interested applicants are advised to email long.huang@xjtlu.edu.cn (XJTLU principal supervisor's email address) the following documents for initial review and assessment (please put the project title in the subject line).

- CV
- Two formal reference letters
- Personal statement outlining your interest in the position
- Certificates of English language qualifications (IELTS or equivalent)
- Full academic transcripts in both Chinese and English (for international students, only the English version is required)
- Verified certificates of education qualifications in both Chinese and English (for international students, only the English version is required)
- PDF copy of Master Degree dissertation (or an equivalent writing sample) and examiners reports available
