

Policy Recommendations for the Integration of Traditional Industry Transformation and Technological Innovation in Zhangjiagang

BAI Xue

Abstract

As an important industrial city in Suzhou, Zhangjiagang features an industrial structure characterised by the coexistence of traditional and emerging industries. This report analyses the city's practices and challenges in integrating the transformation of traditional industries with technological innovation. Drawing on international experience, it proposes policy recommendations for continuously enhancing the high-quality development of the regional economy from three perspectives: advancing the intelligent and green transformation of traditional industries, strengthening the industrial chains of emerging industries, and strategically planning for future industries.
