

Recommendations for Developing Suzhou's AI Industries in the New Era

Xiao Wang

Abstract

Since the beginning of 2020, COVID-19 has broken out in one country after another. Compared with most governments' anti-pandemic performance, the Chinese government performed outstandingly, in which the technologies of big data and artificial intelligence (AI) played a critical role. Subsequently, how to utilise AI to further promote regional economies in the new era becomes an inevitable topic with profound significance. Deploying a perspective of Futurology and Technological Innovation, this article proposes several strategic directions for integrating AI into divergent industries for Suzhou's sustainable development, which might be conducive to formulating relevant decisions and policies.
